SEARCH REQUEST FORM
Requester's Full Name: TANE ZALA Examiner #: 77512 Date: 10-12 Art Unit: 1635 Phone Number: 2-0765 Serial Number: 10604721 Location (Bldg/Room#): 8000 Mailbox #): 2018 Results Format Preferred (circle): PAPED DIS ***********************************
To ensure an efficient and quality search, please attach a copy of the cover sheet, claims, and abstract or fill out the following:
Title of Invention: Bio IN FORMATICALLY DETECTABLE,
Inventors (please provide full names): Bentuich
Earliest Priority Date: 8-13-63
Search Topic: Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter, elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept of Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known.
For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent number, appropriate serial number.
Please Search Seg ID No: 8797 Please limit to 120 NTS.
Plene Send Seg ID Nov.: 5135, 6033, 5136 + 60:

Detecting open chromatin comprises determining hybridization of the capture probe to the treated- and untreated-sample amplification

Example 1; Page 37; 43pp; English

de de bubblication teacturion using a second amplification reaction using a second amplification reaction using a second portion of the chromatin sample, where the second portion is not treated with the open chromatin pade leaving agent, to produce untreated-sample amplification products and the untreated-sample amplification products and the untreated-sample amplification products probe; and determining the hybridization of the capture probe to the products, where probe, and where reduced hybridization of the capture probe to the capture probe to the untreated-sample amplification products secondaried to the hybridization of the capture probe to the capture probe to the untreated-sample amplification of the capture probe to the untreated-sample amplification products

I a chromatin in genomic DNA. The methods and chromatin state profiling array a determining the hybridization of a capture probe to a treated sample amplification products and the untreated sample amplification products. Specifically, the method comprises preparing a chromatin sample from cells, the chromatin sample comprising genomic DNA segments or genomic DNA with one or more open chromatin sites; treating a first portion of the chromatin sample with an open chromatin DNA cleaving agent to produce fragments; performing a first amplification reaction using the fragments as a substrate, to produce treated-sample amplification products; treatment and evaluating the response of cells and patients to candidate or established therapeutic agents. The present sequence is a 3' reverse open chromatin in genomic DNA by chromatin for monitoring or established therapeutic agents. The present sequence is a primer for one-sided PCR amplification of DNase I treated chr fragments, deposited on a chromatin profiling array diagnostic and prognostic methods, and are useful new invention relates to detecting

RNA Composition comprising enzyme which comprises heterologous functional domain that provides altered functionality in nucleic acid cleavage assay, useful for cleaving nucleic acid, and detecting presence of RNF target

Claim 95; SEQ ID NO 2144; 1266pp; English

This invention describes a novel composition comprising an enzyme which contains a heterologous functional domain that provides altered functionality in a nucleic acid cleavage assay. The enzyme comprises a 5' nuclease, preferably a thermostable 5' nuclease, or a polymerase so in collected to a naturally occurring sequence of a attered in sequence related to a naturally occurring sequence of a collected in sequence related to a naturally occurring sequence of a the naturally occurring polymerase. Preferably the polymerase is a thermostable polymerase from a Thermus species such as T. aquaticus, T. C. T. thermophilus, T. filiformus or T. soctoductus. The enzyme comprises a heterologous functional domain, an amino acid sequence that provides an improved substrate binding activity in the nucleic acid comprises an entitle sequence that provides improved background specificity in the nucleic acid (a cytochrome cleavage structure comprises a RNA target nucleic acid (a cytochrome cleavage structure comprises a RNA target nucleic acid (a cytochrome cleavage structure comprises a RNA target nucleic acid (a cytochrome cleavage structure comprises a RNA target nucleic acid (a cytochrome cleavage structure comprises a RNA target nucleic acid (a cytochrome cleavage structure comprises of fluorescence energy transfer or by detecting fluorescence, mass or fluorescence energy transfer or by containing and acid acid involves exposing a sample (a cell lysate) comprising substrate cleavage product. The enzyme is useful for cleaving a nucleic acid conprising wild-type and mutant allease of genes including genes conduction the animal or plants that are or may be associated with the animal or plants that are or may be associated with the animal or plants that are or may be associated with

disease or other conditions. In addition, the enzymes may be useful for detecting and identifying strains of microorganisms including bacteria, fungi, protozoa, ciliates and viruses, preferably detecting and identifying viruses having RNA genomes, such as hepatitis C and human immunodeficiency virus

nucleic acid sequence by attaching a adapter nucleic acid (AB000010-AB013409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid with (1). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Array comprising adapter sequences useful for immobilizing or detecting a target nucleic acid sequence, has different addresses comprising different specific capture probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an oligonucleotide array (I) comprising at least 25 different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences given in ABQ00010-ABQ13409. (I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid

```

Array comprising adapter sequences useful for immobilizing or detecting target nucleic acid sequence, has different addresses comprising different specific capture probes.

Claim 1; Page 244; 261pp; English.

```
The invention relates to an oligonucleotide array (I) comprising at least different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences given in ABQ00010-ABQ13409. [I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Title: Perfect 6

```
New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with
                                                                                                                                                                                                                                                                                                  Cervical cancer; cytostatic; pre-malignant condition; gene therapy; ss.
                                                                                                                                                                                                                                                                                   Human cervical cancer marker nucleic acid 193.
                                                                                                                                                                                                                                                                                                                                                                                                                      (MILL-) MILLENNIUM PREDICTIVE MEDICINE INC.

The cdps sequences encode corn tassel-derived polypeptides (CDPs). The cdps sequences can be used for determining altered gene expression, to recover characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated with growth and development, disease resistance, environmental adaptability, quality and yield, and as molecular markers for studying inheritance of multigene traits in a plant breeding program. (I) can be used to produce a tassel-specific profile of gene transcription, a transcript image, to
cervical cancer or has a pre-malignant condition; to monitor the grogression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be
                                                                                                                                                                                                                                                                                                                                                                                                         75

The present invention describes a new composition comprising an antisense

```
continuerorate (Nat. Aut. 100 was accordance top to 15%), which carges and/or inflammation. The ON can have antilnflammatory, antiallergic, and/or can final analgesic activities. The compositions are antiachmatic. Tycostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary of effects affilict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary vasconstriction, allergies, asthma, compared respiration, respiratory distress syndrome, pain, cystic compared in the cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including to breast and prostate cancer. The reduction of the adenosine content of the content of construction and inflammation. AAA32312 to AAA35312 represent the concleotide sequences given in the sequence listing from the present correspond to SEQ ID NO:1 to 2815, and then the last 185 including which correspond to SEQ ID NO:1 to 1690 (AAA32332 to AAA3392) are specifically claimed only from the present invention. N.B. Sequences given in the disclosure of the present invention do not match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Low adenosine antisense oligonucleotide, phosphorothioate, allergy, human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive, antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4 GGGCGGGGGAGACGACCGCUCUGGCCCCUUAAUUGUACUUCGGGCCUCGUAUUGUCUC 63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
oligonucleotide (ON) with low adenosine (up to 15%), which targets
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a cuse in antisense gene therapy. The composition may have a computation are subject; for reducing or depleting levels of an antisinflammation bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject; a tissue, or treating bronchocompositicion, cung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed appearance of the printed appearance of the printed appearance of the sequence data for this patent is not represented in the printed appearance of the composition of the printed appearance of the sequence data for this patent is not represented in the printed appearance of the composition of the co

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alternative base. (II) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with ungivespiratory disorders and malignancies, such as stimulating and activities and malignancies, such as stimulating and activities and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, chemokines, endogenously produced specific and non-specific enzymes, binding proteins adhesion molecules and their receptors, cytokines and chemokine receptors, adenosine receptors, bradypinin receptors, crotokine and cransmitters, defensins growth factors, bradypinin respectors, creeptors, cantisense oligonucleotides may be used in this way to treat disorders antisense oligonucleotides may be used in this way to treat disorders and or bronchoconstriction and/or bronchoconstriction and/or particular and/or and/or bronchoconstriction) and/or lung inflammation, allergy (set) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasociated with a disease (CPDE), by pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary conditions and/or cancer. ARF18434 to AARF21643 represent human polynucleotide and/or cancer. AARF18434 to AARF21643 represent human polynucleotide in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                              Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABQ9016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of
                                                                                                                                                                                                                                                          Novel DNA array useful for determining differential expression of Methylococcus capsulatus genes, comprises polynucleotides or oligonucleotides representative for a selective number of Methylococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Aguilar D;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a probe to test the method of the invention. The method of the invention is for amplifying a nucleic acid molecule. It comprises mixing at least one rolling circle replication primer (RCRP) with at least one amplification target circle (ATC) which comprises a single stranded circular DNA containing a region complementary to the CRCRP, such that the RCRP hybridises to the ATC and mixing the ATC-RCRP complex with a DNA polymerase and incubating such that a tandem sequence DNA is formed. The method, designated unimolecular segment amplification, is used for detecting specific sequences with high speed and sensitivity. It is especially useful for detecting mutations in genes where numerous distinct mutations are associated with a disease or where mutations in multiple genes are involved. The method is isothermal and provides a simple, consistent amplification occurs not in cycles but as a single continuous reaction. The method is strictly quantitative as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                             Unimolecular segment amplification method for amplifying nucleic acids -uses rolling circle mechanism of amplification, useful for disease-associated genetic mutation(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amplification step is linear and is catalysed by a highly processive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Micro array; gene; ds; differential expression; gene expression.

The invention relates to a purified and isolated non-naturally occurring uncleic acid ligand (an RNA aptamer) to hepatocyte growth factor/scatter factor (HGF) or the HGF receptor, c-met. The ligand comprises a sequence selected from 148 fully defined sequences of 17-101 bp given in the selected from 148 fully defined sequences of 17-101 bp given in the selected from 148 fully defined sequences of 17-101 bp given in the selected from 148 fully defined sequences of 17-101 bp given in the captamer, a method for inhibiting angiogenesis by administering the administering the administering a method for inhibiting of treating the HGF level in an inhibiting tumour comprising the aptamer (and a pharmaceutical excipient), a method for treating a disease of a stansative factor (by a method for inhibiting tumour development acid ligand to HGF) and a method for inhibiting tumour development of a mucleic acid ligand to vascular endothelial factor (VGGF) and/or with a nucleic acid ligands to a teast 2 receptors of growth factors basic fibroblast growth factor, nucleic acid ligands to an least 2 receptors of growth factors in combination with nucleic acid ligands to an least 2 receptors of growth factors in combination with nucleic acid ligands to one or more growth factors.

Combination with nucleic acid ligands to one or more growth factors or nucleic acid ligands are useful as diagnostic and therapeutic agents for hypertension, arreniosclevial myocardial infarction and rheumatoid are useful as diagnostic and therapeutic agents for hypertension, arreniosclevial myocardial infarction and rheumatoid diagnostic information. Nucleic acid ligands that inhibit HGF/c-met interaction are useful for inhibiting tumouriscensis by inhibiting tumouriscensis and motogenesis. The high-affinity nucleic acid ligands coulting the containing modified nuclecties in an individual to obtain prognostic and the containing modified invivo grability or improved delivery containing modified nuclecties end in the papamers when the sequence is an RNA an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         40N) surrounded by a constant region. The present sequence is an RNA sequence included in the sequence listing but not mentioned anywhere else

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                               comportating oligonucleotides, effective for alleviating because again, comportating oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and bronchoconstriction or respiratory tract inflammation, allergies and cardian adendates of adenominate or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating or regulating dysfunction or cancer and can be anti-sense to the corresponding mRNA.

The invention also describes a kit, that comprises: (a) a delivery of the invention has antiallergic, and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, of the invention has antiallergic, antiinflammatory, antiasthmatic, beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition conspises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The production allammaty observation and/or surfaction and/or lung are asservation and an encompassion of the target mRNA or in the lumps. The second and the administration and/or lung or availability or an encompassion of the production allammation are asserted and an encompassion of the target mRNA or increase the amount observates and an encompassion of the asserted and an encompassion of an encompas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, thilammation, allergies asthma, impeded respiration, respirator, distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ines present in the target RNA serves to prevent the breakdown of igonucleotides into products that free adenosine into the system lung, brain, heart, kidney, etc, tissue environment and thereby, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4 GGGCGGGGGAGAGAGGAGGGCGCCCCUUAAUUGUACUUCGGGCUCGUAUUGUCUC 63

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oilgo-dr primed cDNA libraries. Such ESTs are not well suited from oilgo-dr primed cDNA sequences Auch ESTs are not well suited for isolating cDNA sequences CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                             Human, 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       used to obtain upstream regulatory sequences and to design

Identifying nucleic acid ligand of target molecule from mixture comprising single stranded nucleic acids having region of randomized sequence by contacting mixture with target molecule, amplifying affinity

Claim 27; SEQ ID NO 6; 90pp; English.

nucleic acids.

```
chemistry, useful in wide range of diagnostic assays and as direct chemistry, useful in wide range of diagnostic assays and as direct benefits to many area of the research, including blomedical and health cresearch. Improved aptemers are useful in developing diagnostic assays, for example as diagnostic markers in medical analysis, in vivo imaging and blosensors. The aptemers are used to develop high-sensitivity affinity probe capillary electrophoresis (APCE) assays, in BLISA type assays using enzyme-linked DNA aptemers. Thrombin aptemers be developed for using fibre-optic microarray biosensors. Aptamers against transformed endochellal cells may be selected for use as a histological markers to identify tumour microvessels. Aptamers may be developed for use in other aptamer-based assays, such as assays for analytes ranging from anthrax spores to cocaine. Aptamers having improved quality, improved binding efficiency and selectivity can be identified by the method of the invention. The present sequence is that of an aptamer. DNA sequence which was identified using the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel method (CE-SELEX, Capillary Electrophoresis-Systematic Evolution of Ligands by Exponential antichment) of identifying nucleic acid ligands of a target molecule from a candidate mixture comprised of single stranded nucleic acids each having a region of randomised sequence by contacting the mixture with the target molecule, where nucleic acids having affinity to the target molecule, where nucleic acids having affinity to the target molecule, where nucleic acids applicated a ligand-enriched mixture of nucleic acids. The invention may be useful for the production of compounds with an antiasthmatic, cerebroprotective, anti-HIV or virucide activity. The method is useful for identifying nucleic acid ligands of a target molecule from a candidate mixture comparised of single stranded nucleic acids each having a region of randomised sequence. Aptamers identified by the method are useful as a tool in analytical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2 GCAGCACAGAGGTCAGATGTTGTGTACCGTTATTTGTGCCTCAGCATCCCCGTGGCTAAC 61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 5912 nucleotide sequences, appearing as ABX50072-ABX593, or complements of them. Also included are; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3, non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue complementary nucleic acid sequences or its complement or fragment) with a complementary nucleic acid sequences or its complement or fragment) with a complementary nucleic acid permits the detection of the molecule; and (b) cusplementary nucleic acid permits the detection of the molecule; and (complementary nucleic acid permits the detection of the molecule; and (b) complementary nucleic acid permits the detection of the molecule; and (complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the complementary nucleic acid is used for law of the pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule acid is need for breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 5912 bovine LMFD EXT (expressed sequence was not shown in the specification but was obtained in the borine LMFD acids.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Purified nucleic acid molecules, useful for genome mapping, gene identification and analysis, cattle breeding or preparation of constructs for cattle gene expression and genetically improved cattle.
                                                                                                                                                                                                                                                                                                            Bovine, 88; EST; expressed sequence tag; lactation; LMFD;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-mallygnant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (AAH68727-AAH73383) associated with

The invention relates to an anti-HM1.24 (I) antibody which has a modified sugar chain. Also included are an antibody composition, containing (I) in which the sugar chain ides not contain fucose and the relative ratio of the sugar chain is 30% or more and producing the antibody. The modified antibody is produced by culturing a host cell in which the ability of the cell to add fucose in the sugar chain of the antibody, is deleted, and in which the nucleic acid encoding the antibody is introduced, by culturing a host cell in which nucleic acid encoding N-acetyl chost cell having both deleted fucose addition ability and ability to express N-acetyl glucosamine transferase III, and extracting the antibody concern the cultured solution. The antibody does not contain alpha-1, 6 core fucose and/or has a sugar chain having a bisecting N-acetylglucosamine (GLONAC) structure. The modified antibody does not contain alpha-1, 6 core tumor and is useful as a therapeutic agent for treating myeloma such as multiple myeloma. The antibody-dependent cellular cytotoxicity (ADCC) of the antibody) is enhanced by the sugar chain modification. The present cellular antibody is a PCR primer used to produce a mutant GnIIII DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-HM1.24 antibody useful for diagnosis of a tumor and useful as a
therapeutic agent for treating myeloma, comprises a modified sugar chain.

Sanger Xenopus tropicalis EST project 2001
TROPICALIS EXQUENCE ID: TTPA036j08.plkSP6
Sequenching primer: SP6
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Nigel Garrett.
CDNA was oligo dT primed from 5ug of poly A+ RNA from tadpole
embryos. ECORI.NotI cut CDNA was then ligated into pCS107 with
ECORI at the 5' end and NotI at the 3' end.
Vector: pCS107; Site_1: ECORI; Site_2: NotI
Host: Escherichia coli DH108.
                                                                                                                                                                                                                                                                                                                                                                              Eukaria Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Eukabibia; Metazoa; Chordata; Mesobatrachia; Pipoidea; Pipidae; Xenopodinae; Xenopus; Silurana.

The library was constructed by Brandi Chiapelli and Dr. James
McCarter at Washington University, St. Louis. The cDNA was made by
using Dynabead oligo-dr priming (Dynal). PCR based library using a
modified protocol from the SMART PCR cDNA Synthesis Kit from
Clontech. Directionally cloned into the UDG sites of pAMP1.
Dissected nematode tissues were provided by Dr. Alan Scott
(ascott@jhsph.edu) of the School of Public Hygene and Public Health
at John Hopkins University in Baltimore, MD.
Seg primer: T7 from Gibco
High quality sequence stop: 99.

The CDNA was made by using Dynabead oligo-dT priming (Dynal). PCR based library using a modified protocol from the SMART PCR CDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. Dissected nematode tissues were provided by Dr. Alan Scott (ascott@insph.edu) of the School of Public Hygene and Public Health at John Hopkins University in Baltimore, MD."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BF147704 150ares NMEBA branchial arch Mus musculus cDNA clone IMAGE:3169512 3' Similar to TR:Q15022 Q15022 ORF ;, mRNA sequence.

Inote="Organ: leaf; Vector: pBCSK(-); Site_1: HincII; DNA prepared from purified nuclei was randomly sheared, deforted repaired, size fractionated to enrich for the 0.5 to 5 kb fraction, ligated into HincII-digested pBCSK(-) vector and electropozated into E. coli cells. This is a methylation filtered library."
This sequence was generated from the T7 end of BAC 438014. 438014 is part of the CH012-242 BAC Library created by P. de Jong. Further details: http://www.sanger.ac.uk/Projects/S_scrofa/. Location/Qualifiers

Single pass sequencing. Bases called and trimmed with phred
V0.020425.c. Vector identified by cross match with the -minscore 20
and -minmatch 12 options. Vector:pBlueScriptil(KS) R. Sitel: ECORI
R. Site2: Not1 5' Seq Primer M13F Normalised library constructed
from pooled ovaries. Clones available from UK Centre for Functional
Genomics in Farm Animals, Roslin Institite, Roslin, Midlothian, UK,
EH2S 9PS, www.ark-genomics.org.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 415, Application US/08687421

Patent No. 6177557

GENERAL INPORMATION

APPLICANT: Janjic, Nebojsa

APPLICANT: Tasset, Dianne

TITLE OF INVENTION: HIGH-AFFINITY LIGANDS OF BASIC

TITLE OF INVENTION: FIRROBLAST GROWTH FACTOR AND

TITLE OF INVENTION: THROMBIN

NUMBER OF SEQUENCES: 445

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                           1 ggagggggggggagagacga......ucucuccuuucgccaccucc

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Seguence 64
